List of Tables

Preface

Put your preface here.

1 Introduction

Your introduction goes here.

The paper is structured as follows ...

2 Other Sections

To cite you use the cite command [1]. Abstract and Conclusion sections must not contain citations or special formating such as itemized lists.

3 Including Figures

This is how to include and refer to Figure 1.

Example for a side by side figure is Figure 2 with ist subfigures 2.a and 2.b.

4 Make

The best way to create the documents is form the commandline (under windows you can install miktex and cygwin). Make sure you have make installed. Once that is done you can craete the contents while modifying the following files in teh directory.

paper.tex: contents of the paper you will write

vonLaszewski-template.tex: real name of the latex file that includes the contents from paper.tex. In teh final version the template should be replaced with something more meaningful and the Makefile should be updated. Do not modify the contents of this file too much other than changing title and authors. Typically *Gregor von Laszewski* is always a coauthor.

To create the file and view the pdf file say

```
$ make
$ make view
```

5 Conclusion

Put your conclusions in this section
