Credit Transfer Request

The following is the information of courses that I took when I pursued my master degree in South China Normal University, China. I would like to transfer these course credits to Galisano College of Computing and Information Sciences, RIT.

Name	Grade	Description
Modern Network Technology	95	An introduction to the modern network technology, such as Layer 3 Switch, and MPLS.
Advanced Database System	98	A study of database management systems (DBMS) related algorithms
Grid Computing	86	Basic concept of Grid Computing
Network Security	80	A study of network security technology
Web Services	83	A introduction of protocols, principle and application of Web Services
Distributed Computing	88	The course covers distributed system architectures and distribution system design issues such as communication and deadlock
Logic Principle	80	A brief introduction of mathematical logic.

These courses are all related to the research I am conducting in the program. They are conducted on a semester basis, and I think each of them is equal to a 4 credits course in RIT whose courses are based on a quarter basis.
