Dear Sir/Madam,

I am writing to inquire about the career opportunity as a senior software development engineer. I am very interested in working as a software engineer at Citrix Systems.

I will be graduating from Rochester Institute of Technology in May with a Master of Science degree in Computer Science. As shown in my resume, I have strong Computer Science background, holding a Computer Science Bachelor degree and a Computer Science Master degree and working as a software engineer for 3 years in China. While working as a Java software engineer, my colleagues and I spent 2 years developing a new Banking System for China MinSheng Bank. I also worked as a lecturer in the Web Services class when I pursued my Master degree in China. Being a Java enthusiast, I like to study open source software like Structs or Axis in my spare time and am also a Sun Certified Programmer.

At RIT, I have developed a very unique educational experience that has combined the practical aspects of a career education with the creativity of a research education. I have also become proficient in applying the Computer Science theory I have learned in the classroom to the actual project. Currently, I am working with my advisor Professor Kaminsky on Parallel Java, an API and middleware for parallel programming in Java. Our goal is to develop a Java based efficient platform for parallel computing. As a result of these experiences, I am confident that I will bring both technical skills and a fresh perspective to Citrix Systems.

I am enclosing my resume. My personal information can also be viewed online at http://sites.google.com/site/hexi111/home. I would appreciate an interview with you at your convenience.

I look forward to talking with you soon. Thank you for your consideration.

Sincerely yours,

Xi He
